

QUINTILES
Guy's Drug Research Unit
Clinical Physiologist (Critical Care)
Full-time Permanent Position

Salary c. £38,000 (dependant on experience)
+ Excellent benefits package

Quintiles' provides a wide range of services to the pharmaceutical industry, and our London unit, Guy's Drug Research Unit, has been a world leader in Phase I clinical trials for over 20 years. We have been involved in the development of many new compounds tested on healthy volunteers and will continue to advance drug therapies into the future.

With our emphasis always on safety, we are seeking a motivated and reliable Critical Care Technologist to work within the Clinical Physiology department and to develop their role within GDRU. The successful applicant will work closely with other Clinical Physiologists (from a variety of disciplines) on a range of studies, ensuring that all technical aspects of clinical trials run safely and smoothly.

The role would include:

- Working with the nursing and medical teams
- Scientific and technical advice and training
- Clinical study protocol review
- Equipment management, procurement and maintenance
- Liaison and supervision of Engineers
- Instrument/ computer system validation,
- Managing and maintaining electronic data and utilising databases

This is an excellent opportunity to move into a research environment and develop your professional skills. Quintiles offer an excellent training and development programme for all members of staff.

Minimum requirements for the role include previous experience of working as a Critical Care Technologist, with evidence of further study which may include BSc, BTEC or HNC. With experience gained in a hospital environment you do not require experience within a Phase I environment as this training will be provided, however a keen desire to develop professionally is required. Flexible and adaptable you will be able to maintain high standards particularly accuracy under pressure and have the interpersonal skills to work effectively as a team member.
